ACADEMIC PROJECTS

YoutubeDownloader : A simple python project which firstly scrap the youtube web page and extract links. and then using that links download the video/playlist/audio according to the user's choice. beautifulsoup and pytube modules are used for scrapping and downloading

LeisureTime : This is the webapp which connects the user according to their hobbies. LeisureTime means freetime. In this project I used php and mysql with MVC(Model, View, Controller).

Key Management scheme for Satellite Network : This is Ongoing project on which i am working on. In this project, I will implement centralized identit-based key management scheme based on QC-MDPC code of Liu at el.
